

# Replacing your heat pump?

YOU CAN ALSO WATCH A MOVIE ON [THIS LINK](#)

Using a heat pump is an easy and efficient way to heat or cool your home. The heat pump will provide a high level of comfort at a low cost.

1

If you've had a heat pump for many years, you know this already.

... But maybe it's time to replace it?

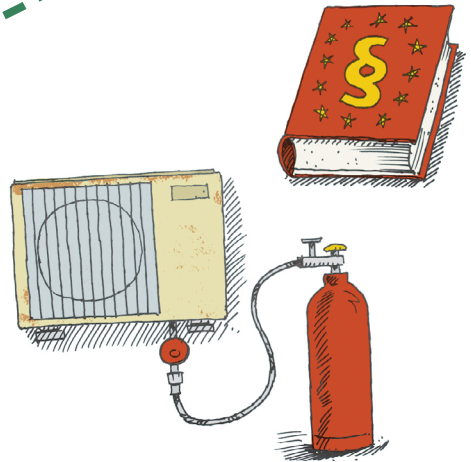

2

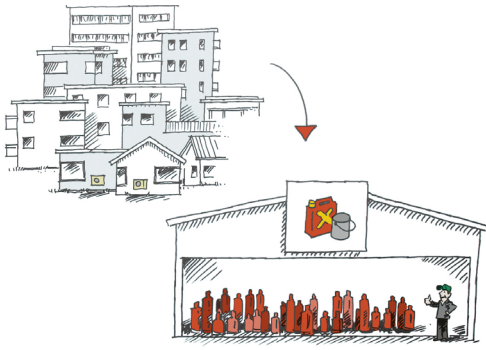

3

Old heat pumps contain gasses that contribute to climate change if they are released. That's why the EU has strict regulations on who can work with heat pumps.

**You are not allowed to remove a heat pump yourself.**

Every year thousands of homeowners have their old heat pump replaced. **When doing so it's crucial to recover the gas safely in order not to damage the climate.**

4

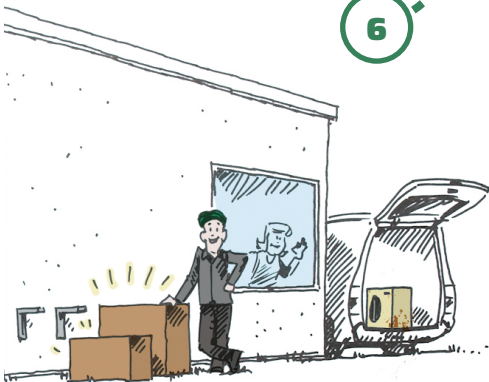

**Make sure you hire an F-gas certified technician to remove your old heat pump in a proper and legal way.** Agree in advance if you have to pay the technician to remove and dispose of the old heat pump.

5

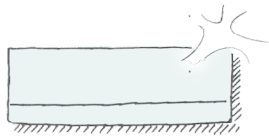

6

It's convenient to order removal of the old unit at the same time as ordering a new heat pump.

**Needless to say, the new heat pump must be installed by an F-gas certified technician.**

# That's how simple it is to replace your old heat pump with a new one.
